CLAMPING SYSTEM ELERO FOR ELECTRODE PRODUCTION FOR DIE-SINKING EDM, PALLETISATION COMPATIBLE WITH EROW.A

Clamping systems compatible with EROW.A

The following components of the palletisation clamping system enable the material for the electrode (copper, graphite etc.) to be clamped directly into the pallet or into the collet chuck holder. The material can then be machined in a machining centre, milling machine, lathe, grinding machine or EDM wire cutter etc. The finished product (the electrode), whilst still clamped into pallet or collet chuck holder, can now be clamped directly to the EDM die-sinker without the need for further adjustment of the electrode. Repeatable accuracy for the positioning of the pallets or collet chuck holders into the clamping chucks is 0,002mm.
